

BLUEBEAM STUDIO

Three options for streamlined collaboration

Bluebeam Studio is a collaboration platform—included with every seat of Revu—that connects project partners worldwide in real time on the same set of centralized documents.

Bluebeam also offers two paid Studio options for organizations looking for advanced functionality or on-premise control: Studio Prime and Studio Enterprise.

Studio: The Collaboration Platform Included with Revu

Studio is included with Revu, and it offers two ways to collaborate: Studio Sessions and Studio Projects.

Studio Sessions

Document-based online collaboration in real time.

Studio Projects

Simple document management system for PDFs and other project files.

Key Features and Benefits

Collaborate Online and Offline

Work with files across multiple teams and projects, regardless of internet access.

Security

Store project files in a secure database and effectively manage attendee access and permissions.

Receive Notifications and Alerts

Receive timely notifications on document and user status changes, and issue action item alerts to your project team.

Automated Activity Tracking

Automatically track all markup, collaboration activity and file revisions, and generate a final summary report.

STUDIO PRIME AND STUDIO ENTERPRISE

Studio Prime: Advanced Capabilities for Your Organizational Needs

Studio Prime is the secure cloud-based subscription option that provides advanced administrative functionality for added visibility over your organization's Studio activity, with access to external application integrations.

Studio Prime is an annual subscription, priced according to the total number of allowed users. Contact your reseller for more information.

Key Features and Benefits

User Management

Manage all members of your Studio Prime account, assign ownership or restrictions, and control user access to content and the Bluebeam Studio API.

Studio Insights

Gain complete visibility over your organization's Studio usage by issuing and creating in-depth data reports on collaboration activity and participation.

Folder Automation

Configure Folder Automations within a Studio Project to perform repetitive PDF-based workflows for a large number of users, such as converting source files to PDF, exporting markups, inserting cover sheets and more.

Bluebeam Studio API

Harness the power of Bluebeam's collaboration technology and manage client integrations with internal and external applications.

Studio Enterprise: For On-Premise Control

Studio Enterprise allows your organization to leverage the power of Bluebeam Studio on your own server, within a controlled environment that meets security protocol.

Studio Enterprise is sold on a per server basis and includes one year of maintenance.

- Maintenance covers upgrades, plus unlimited phone and email support, for one year.
- After the first year, you have the option to renew your Maintenance agreement.

Contact your reseller for more information on pricing and the added benefits of Studio Enterprise, including greater control over user access and Studio activity.
